Precision
Inspection

The **SafeGauge Inspection Camera** sets a new standard for remote visual inspections in high-risk or confined environments.

Designed to integrate seamlessly with the MultiTool Pro, it streams high-resolution imagery via secure local Wi-Fi from up to 50 metres away, with no internet connection required.

Compact and rugged, it features a magnetic mount with a lockable swivel head for quick and flexible deployment in under 10 seconds.

Technicians can save and export visuals, then integrate them into SafeGauge test reports to improve accuracy, safety, and operational efficiency.
